The **Worldwide Insecticide resistance Network**

The WIN proposes to bring together internationally recognized institutions in vector research, providing an unique framework for tracking and combating insecticide resistance in mosquito vectors of arboviruses worldwide.

→ **WHO WE ARE**

15 research partners across the world including 5 LMICs (Iran, Thailand, India, Brazil, Mali) with complementary expertise in insecticide resistance (from vector biology and control to resistance diagnostic tools and spatial modeling).

→ **WHAT WE DO**

Identify areas where resistance challenges vector control and where resistance is under-reported

Assist national authorities (WHO) in decision-making for insecticide resistance management and deployment of alternative control tools

Fill knowledge gaps on insecticide resistance in arbovirus vectors through commissioned reviews
