Summer Research Internship at Johns Hopkins University

The research laboratory of Dr. Noah M. Hahn MD within the Johns Hopkins Greenberg Bladder Cancer Institute (GBCI) in Baltimore, Maryland, is accepting applications for summer research interns for the summer of 2019. The GBCI is a first-of-its-kind organization founded in 2014 with the sole mission to eradicate bladder cancer through better understanding of its molecular underpinnings, improved treatment outcomes, and heightened public and patient awareness. The Hahn lab focuses on novel epigenetic diagnostic and therapeutic approaches to improve outcomes of patients and families affected by bladder cancer. Over the course of the summer, research interns will be introduced to basic laboratory techniques (cell culture, MTT assessment, DNA/RNA extraction, qPCR, Western blot, etc.) commonly used in medical research labs throughout the world, observe the medical and surgical care of bladder cancer patients, and complete a primary research project of their own. This internship provides a unique opportunity for research interns to be exposed to multiple leaders in the bladder cancer research community at one of the world’s most esteemed academic medical institutions. No prior research experience is required. Applicants intending to pursue medical school training or primary medical research based graduate programs are encouraged to apply. Interested applicants should send a personal statement (1-page maximum) with their resume or CV to nhahn4@jhmi.edu by December 21, 2018. Finalists for the positions will be notified over the holiday break and on-campus interviews will be conducted in January 2019 shortly after second semester classes begin.

Noah M. Hahn, M.D.
Associate Professor of Oncology and Urology
Sidney Kimmel Comprehensive Cancer Center at Johns Hopkins
Director, Bladder Cancer Medical Oncology Program
The Bunting-Blaustein Cancer Research Building 1, Room IM42
1650 Orleans Street
Baltimore, MD 21287
