The **Cosford Laboratory** is interested in investigating the interactions of small molecule compounds with therapeutically important proteins and cellular signaling pathways. One aspect of our research emphasizes the use of medicinal chemistry and chemical biology approaches to probe intracellular pathways that regulate cell survival and cell growth. Another area of active research is the development of novel biochemical, biophysical, and cellular assay technologies for the rapid identification and characterization of biologically active small molecules. Therapeutically, we are primarily focused on the discovery and optimization of compounds that have the potential to treat cancer, CNS diseases and infectious diseases.

Sanford Burnham Prebys (SBP) is a preeminent, independent biomedical research institute dedicated to understanding human biology and disease, and advancing scientific discoveries to profoundly impact human health. Our scientists are making research breakthroughs in cancer, neuroscience, immunology, and children's disease

The Center for Career Development has partnered with an ND alum at Sanford Burnham Prebys for a Research Assistant I in La Jolla, CA. This position **needs to be filled ASAP** so don't delay in applying! Apply both on Handshake and at the external link for consideration.
